

Easy Frame®

Before

After

Precision Frameworks Easy Frame®, is a flat backed molding that DOES NOT have a rabbet. Easy Frame® is designed for mirrors that are already installed on the wall and is basically a wooden framed version of a bevel strip. Easy Frame® can be used to cover up black edge that mirrors may have incurred over time, or if you simply want to improve the look of the mirror and turn it into a seemingly high quality framed mirror. The Easy Frame® is installed with an industrial strength double sided tape and adheres directly on to the face of the mirror.

All of our frames are shipped knocked down (to save on shipping cost) and are ready to assemble via our prepacked assembly kit. We precut all of the frames to the custom size that is required.

Easy Frame® is manufactured and fabricated here in the US and the product ships out of Atlanta, GA.

The Easy Frame® is made from Medium-Density Fiberboard (MDF) and the finishes compromise of laminated vinyl/foil wraps and a liquid compo that hard sets on the surface that allows for intricate and ornate designs to be printed on to the molding.
